During the trip to California there will be plenty of free time for the students in Disneyland and California Adventure. While in the park the kids will be required to stay with a buddy and check in with their chaperone regularly. Due to the size of the parks we would like to ask for your permission to use an additional safety tool called Life 360.

Life 360 is a free communication and location application that can be downloaded onto your student's smart phone. Specifically, the "temporary circle" feature is what is being suggested for only the five days of the trip.

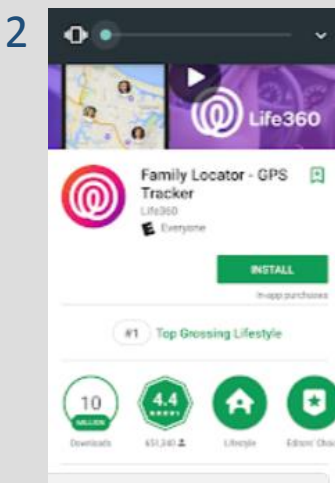

FAQ: The app works on Iphone and Android devices. Life360 has the lowest battery drain of all locator apps on the market. Most users should expect about 10% shorter battery life in a 24-hour period when running Life360. In order for Life360 to collect and refresh a user's location, he/she must have Location Services and Background App Refresh (IOS) turned on in phone settings. The average data usage for our application is between 8MB-60MB per month. This depends on how often you check in and move around. This can be reduced when connected to Wifi, which will be available at most times during the trip.

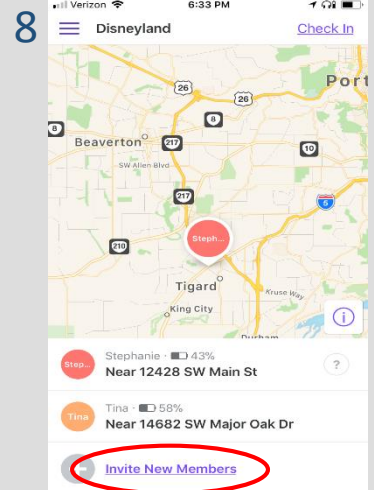

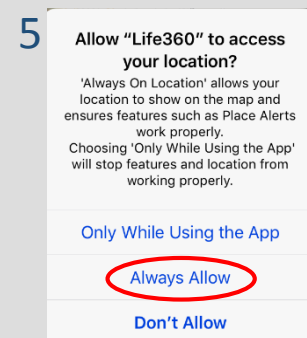

1 *Download this app if you have an iphone*

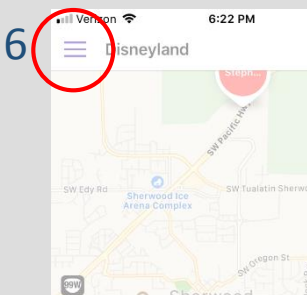

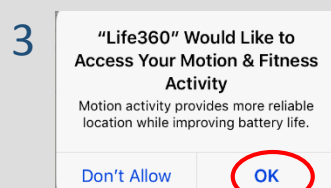

7 *Create a temporary circle titled "Disneyland"*

2 *The app looks like this on an android.*

8 *Click "invite new members" and text the invite code to each student.*

6 *Click on the menu icon.*

How do I invite someone that does not have a smartphone?

First, add them to your Circle in the app. On the invite page, choose the "No Smartphone" option. They will receive an SMS invitation to join your Circle. Once they accept by replying YES, you can update their location at any time. This service can only be used in the United States and works on any of these carriers: AT&T, Verizon, TMobile, or Sprint.

2. Check your Circle member's phone settings

- **iOS location setting** needs to be set to "**Always**". Using the setting "While in Use" will **not** allow the app to work correctly or maintain location accurately.
- **Low Power Mode on iOS:** Low Power mode reduces or turns off **background app refresh** which will prevent Life360 from running. When enabled, the battery icon at the top of your phone will appear yellow. Disable Low Power Mode to maintain your Life360 connection.
- **Cellular Data** - Life360 **must** be allowed to use cellular data to function properly.
- **High Accuracy Mode** needs to be on for Android devices.
- **Smart Manager on Android:** Disable the "App Optimization" mode for the Life360 app. This needs to be done to allow Life360 to run in the background and update regularly.
